Graduate Certificate in Business Intelligence

Offered by the Business & Information Technology Department

Overview
Interest in business intelligence has been a recent strong theme among employers of our graduate students and among our distance students. Medium and large-sized businesses are especially interested. In order to make appropriate decisions, upper-level administration of an organization needs to draw the data together from different systems in order to get a crisper picture of the status and performance of an organization and present it in helpful ways. Examples include the development of organizational scorecards, dashboards and other tools that provide a picture of how an organization is performing. People capable of creating and maintaining such information are needed, but the in-depth education necessary for these people is available in only a few places.

The Graduate Certificate in Business Intelligence focuses on the technologies that allow an organization to make effective business decisions based on operational data pulled together from many different sources inside an organization. The target audience consists of any individual who would manage any type of IT professionals, database administrators, business analysts, and any person who would need to understand the technologies behind the capabilities of those technologies.

Graduate Certificate in Business Intelligence
A graduate level student may receive a Graduate Certificate in Business Intelligence from the Information Science and Technology program within the Business and Information Technology department at Missouri S&T by completing four courses. Two of the courses are required:
- Use of Business Intelligence (ERP 5410)
- Essentials of Data Warehouses (IST/ERP 6444).

The other two courses may be chosen from the following:
- ERP Systems Design and Implementation (ERP 5110)
- Strategic Enterprise Management Systems (ERP 5210)
- Customer Relationship Management (ERP 5610)
- Information Retrieval & Analysis (IST 6443)
- Database Marketing (IST 6445)
- Enterprise Performance Management System Prototyping (ERP 6220).

Admission
Admission to a graduate certificate program requires proof of completion of an undergraduate degree. Students who do not have all of the prerequisites necessary to take the courses in their chosen certificate program will be allowed to take “bridge” courses at either the graduate or the undergraduate level in order to prepare for the necessary certificate courses, prior to starting the certificate courses. Students intending to enter the graduate program corresponding to the certificate must complete all prerequisites to that program before being admitted to it.

Entrance into IST M.S. Graduate Program or MBA Program:
A student who completes a Graduate Certificate at Missouri S&T having earned a grade of "B" or better in each of the certificate courses, may be admitted to the M.S. program in Information Science & Technology or to the MBA program. The normal application process will be followed, but the minimum undergraduate GPA and GRE/GMAT score requirement will be waived. Normal course prerequisites still apply.
Graduate Certificate in Business Intelligence Courses

Required Courses: (each of these is a three-credit course)

ERP 5410: Use of Business Intelligence
Designs, methods and tools for creating low and high fidelity prototypes of information technology systems. Different prototyping approaches are examined as part of the iterative design cycle that is commonly used for developing usable information technologies. **Prerequisite: ERP 5110.**

IST 6444/ERP 6444: Essentials of Data Warehouses
This course presents the topic of data warehouses and the value to the organization. It takes the student from the database platform to structuring a data warehouse environment. Focus is placed on simplicity and addressing the user community needs. **Prerequisite: IST 4323 or equivalent relational database experience.**

Elective Courses (choose two): (each of these is a three-credit course)

This course provides a technical overview of Enterprise Resource Planning Systems and their impact on organizations. SAP's ERP system is introduced to illustrate the concepts, fundamentals, framework, general information technology context, the technological infrastructure, and integration of business enterprise-wide applications. **Prerequisites: IST 1750**

ERP 5210: Strategic Enterprise Management (SEM) Systems
This course will study different strategic performance management systems including dashboards, management cockpit, scorecards, and strategy maps in an organization. SAP's Strategic Enterprise Management (SEM), BusinessObjects Xcelsius, or similar tools will be used to enhance student education with real world applications. **Prerequisite: ERP 2110 or BUS 6426 or ERP 5110 (may be taken concurrently)**

ERP 5610 Customer Relationship Management
This customer-centric course emphasizes identification (targeting), acquisition, retention, and development (expansion) of (profitable) customers. It also covers effective and efficient management of customers with utilization of information technology. The SAP CRM module and SAS Enterprise Miner are used to enhance student education with real world applications and prepare graduates for future career requirements. **Prerequisite: ERP5410 or ERP/IST 6444**

ERP 6220 Enterprise Performance Management System (EPMS) Prototyping
This course will study implementation and design practices for enterprise performance management and monitoring systems with a focus on dashboards, balanced scorecard, and value based management. SAP's Strategic Enterprise Management (SEM), Business Object Xcelsius, or similar tools will be used for project implementation. **Prerequisite: ERP 5110, ERP/IST 6444**

IST 6443: Information Retrieval & Analysis
Focus is on applied analysis of complex information networks in the form of web and text systems. Topics include web system link analysis, text mining, consensus analysis, collaborative filtering, recommender systems. Uses interactive data analysis tools such as SAS. **Prerequisite: Database and Statistics Familiarity.**

IST 6445: Database Marketing
Methods & concepts used in database marketing, such as 1) predictive modeling techniques (e.g., regression, decision trees, cluster analysis) and 2) standard processes for mapping business objectives to data mining goals to produce a deployable marketing model. Covers metrics like lifetime value of a customer and ROI; several application areas. **Prerequisite: Statistics understanding, programming understanding, familiarity with spreadsheets.**

Planned Regular Schedule For Required Courses
